1	Introduction	1
1.1	Problem Statement	3
1.2	Outline	4
2	Related Work	5
2.1	Neutron Star Oscillation Modes	5
2.1.1	Non-rotating Neutron Stars	5
2.1.2	Rotating Neutron Stars	8
2.2	Tidal Deformability	10
2.2.1	Relations Between Tidal Deformability and Oscillation Modes	11
2.3	Other Universal Relations	12
2.4	Binary Neutron Stars	14
2.4.1	Binary Love Relations	14
2.4.2	Effective Tidal Deformability and Chirp Mass	14
2.4.3	Tidal Coupling Constant	16
2.4.4	High Resolution Simulations	17
2.5	Discussion	18
3	Theory	19
3.1	Neutron Star Equilibrium Model and TOV Equations	19
3.2	Neutron Star Bulk Properties	22
3.3	Tidal Deformability of Neutron Stars	23
3.3.1	The Tidal Love Number	23
3.3.2	Computing the Tidal Love Number	25
3.3.3	Binary Tidal Deformability	27

3.4	Quasi-normal Modes of Neutron Stars	28
3.4.1	Quasi-normal modes of Rotating Neutron Stars	29
3.5	Goodness of Fit and Error Estimates	30
4	Methodology	33
4.1	Data Set of Rotating Neutron Stars	33
4.2	Relating Tidal Deformability to f -mode Frequency	34
4.3	Binary Neutron Star Mergers	34
4.3.1	Post-merger Remnant	35
5	Results	37
5.1	Revisiting Existing Universal Relations	37
5.2	Universal Relations for Single Neutron Stars	40
5.3	f -mode Relations for BNS Mergers	44
5.3.1	Co-rotating f -mode	44
5.3.2	Counter-rotating f -mode	46
5.4	Combined η Relation for BNS Mergers	50
5.5	Direct η Relation for BNS Mergers	50
5.5.1	Direction Relation with soft EoSs	51
5.5.2	Reintroducing stiff EoSs	53
5.6	Direct Relation with Constraints	54
6	Discussion & Conclusion	57
6.1	Future Directions	58
	Bibliography	59
