Preface ------ V

Preface to the second edition ----- VII

About the authors ----- IX

1	Crystal density — 1
1.1	Group additivity method — 3
1.1.1	The method of atomic contributions 7
1.1.2	Benzene-derived energetic compounds using atomic volumes — 8
1.1.3	The method of group additivity for estimating densities of energetic
	ionic liquids and salts 9
1.2	Quantum mechanical approach — 11
1.2.1	Quantum mechanical approach for neutral energetic compounds 11
1.2.2	Energetic ionic liquids and salts as room temperature energetic materials — 13
1.3	Empirical methods for the calculation of the crystal density
	of different classes of energetic materials 14
1.3.1	Nitroaromatic energetic compounds 14
1.3.2	Acyclic and cyclic nitramines, nitrate esters and nitroaliphatic
	compounds 16
1.3.3	Improved method for the prediction of the crystal densities
	of nitroaliphatics, nitrate esters and nitramines — 18
1.3.4	Reliable correlation for the prediction of the crystal densities
	of polynitro arenes and polynitro heteroarenes — 19
1.3.5	The extended correlation for the prediction of the crystal density
	of energetic compounds 20
1.3.6	Energetic azido compounds — 22
1.4	Empirical methods for the assessment of the crystal density
	of hazardous ionic molecular energetic materials using the
	molecular structures — 24
1.4.1	Two general empirical methods — 24
1.4.2	The effects of various substituents on the density of tetrazolium nitrate
	salts 25
1.4.3	Predicting the density of tetrazole–N-oxide salts 26
1.5	Summary — 27

- 2 Heat of formation 29
- 2.1 Condensed and gas phase heats of formation of energetic compounds ---- 29

- 2.1.1 QM, MM and group additivity approaches ---- 30
- 2.1.2 Empirical approaches or QSPR methods on the basis of structural parameters 33
- 2.2 Energetic compounds with high nitrogen contents ---- 40
- 2.2.1 Using the molecular structure 45
- 2.2.2 Gas phase information 46
- 2.3 The condensed phase heat of formation of energetic ionic liquids and salts ---- 47
- 2.3.1 Complex approach 47
- 2.3.2 QSPR methods ---- 48
- 2.4 Summary 52
- 3 Melting point 53
- 3.1 Group additivity, QSPR and quantum mechanical methods 54
- 3.2 Simple empirical methods on the basis of molecular structure ---- 55
- 3.2.1 Nitroaromatic compounds ---- 56
- 3.2.2 Polynitro arene and polynitro heteroarene compounds ---- 57
- 3.2.3 Nitramines, nitrate esters, nitrate salts and nitroaliphatics ----- 59
- 3.2.4 Nonaromatic energetic compounds ---- 59
- 3.2.5 Improved method for predicting the melting points of energetic compounds ---- 60
- 3.2.6 Organic molecules containing hazardous peroxide groups 64
- 3.2.7 Organic azides 65
- 3.2.8 General method for the prediction of melting points of energetic compounds including organic peroxides, organic azides, organic nitrates, polynitro arenes, polynitro heteroarenes, acyclic and cyclic nitramines, nitrate esters and nitroaliphatic compounds 67
- 3.2.9 Cyclic saturated and unsaturated hydrocarbons 74
- 3.3 Melting points of ionic liquids 77
- 3.3.1 Group additivity approach ---- 78
- 3.3.2 QSPR approaches based on complex descriptors 80
- 3.3.3 Simple approach based on the structure of cations and anions 80
- 3.4 Summary 81

4 Enthalpy and entropy of fusion ----- 85

- 4.1 Different approaches for the prediction of the enthalpy of fusion 85
- 4.1.1 Group additivity method for prediction of the enthalpy of fusion ---- 86
- 4.1.2 Nitroaromatic carbocyclic energetic compounds --- 87
- 4.1.3 Nitroaromatic energetic compounds ---- 88
- 4.1.4 Nonaromatic energetic compounds containing nitramine, nitrate and nitro functional groups ---- 90

	of energetic compounds 91
4.1.6	A reliable method to predict the enthalpy of fusion of energetic
	materials — 94
4.2	Different methods to predict the entropy of fusion — 95
4.3	Summary 103
5	Heat of sublimation —— 105
5.1	Group additivity method for prediction of the heat of
	sublimation — 106
5.2	Quantum mechanical and complex approaches for predicting
	the heat of sublimation — 113
5.3	The use of structural parameters 114
5.3.1	Nitroaromatic compounds — 114
5.3.2	Nitramines — 115
5.3.3	Nitroaromatics, nitramines, nitroaliphatics and nitrate esters 116
5.3.4	General method for polynitro arenes, polynitro heteroarenes, acyclic
	and cyclic nitramines, nitrate esters, nitroaliphatics, cyclic and acyclic
	peroxides, as well as nitrogen-rich compounds — 117
5.4	Summary — 119
6	Impact sensitivity —— 121
6.1	Complex methods —— 122
6.2	Simple methods on the basis of molecular structure for neutral
	energetic compounds 124
6.2.1	Oxygen balance correlations 125
6.2.2	Elemental composition and molecular moieties — 125
6.3	Impact sensitivity of quaternary ammonium-based energetic ionic
	liquids or salts — 136
6.4	Summary — 137
7	Electric spark sensitivity —— 141
7.1	Measurement of electric spark sensitivity — 141
7.2	Different methods for predicting electric spark sensitivity — 142
7.3	Simple methods for predicting electrostatic spark sensitivity based on
	the RDAD instrument 143
7.3.1	Polynitroaromatic compounds — 143
7.3.2	Cyclic and acyclic nitramines —— 144
7.3.3	General correlation for polynitroaromatics as well as cyclic
	and acyclic nitramines — 144

Improved method for the reliable prediction of the enthalpy of fusion

4.1.5

7.4 Simple prediction of electrostatic spark sensitivity based on the new ESZ KTTV instrument — 145

- 7.4.1 Polynitro arenes based on ESZ KTTV ----- 146
- 7.4.2 Nitramines based on ESZ KTTV 148
- 7.4.3 Quaternary ammonium-based energetic ionic liquids or salts based on ESZ KTTV ---- 149
- 7.5 Some aspects of predictive methods 151
- 7.6 Summary 151

8 Shock sensitivity — 153

- 8.1 Small-scale gap test 153
- 8.2 Large-scale gap test ---- 155
- 8.3 Critical diameter of solid pure and composite high explosives 156
- 8.4 Summary 159

9 Friction sensitivity — 161

- 9.1 Friction sensitivity of nitramines 161
- 9.2 Friction sensitivity of quaternary ammonium-based energetic ionic liquids ----- 162
- 9.3 Summary 164

10 Heat sensitivity ----- 165

- 10.1 Thermal kinetics correlations ---- 166
- 10.1.1 Nitroparrafins ---- 167
- 10.1.2 Nitramines ---- 167
- 10.1.3 Polynitro arenes ---- 168
- 10.1.4 Organic energetic compounds 169
- 10.2 Heat of decomposition and temperature
- of thermal decomposition 171
- 10.2.1 Heat of decomposition of nitroaromatics 171
- 10.2.2 Heats of decomposition of organic peroxides ---- 173
- 10.2.3 Onset temperature of polynitro arenes and organic peroxides as well as maximum loss temperature of organic azides ---- 174
- 10.3 Deflagration temperature 177
- 10.3.1 F⁺_{nonadd} ---- 178
- 10.3.2 F⁻_{nonadd} ---- 178
- 10.4 Thermal stability of selected classes of energetic ionic liquids and salts 179
- 10.4.1 Predicting activation energy of thermolysis of some selected ionic liquids 180
- 10.4.2 Decomposition temperature of imidazolium-based energetic ionic liquids or salts ----- 181

10.5	Decomposition temperature of azole-based energetic compounds — 185
10.6	Summary — 186
11	Relationships between different sensitivities — 189
11.1	Relationship between impact sensitivity of energetic compounds and activation energies of thermal decomposition 189
11.1.1	Nitroaromatics — 190
11.1.2	Nitramines — 190
11.2	Relationship between electric spark sensitivity and impact sensitivity of nitroaromatics — 191
11.3	A general correlation between electric spark sensitivity and impact sensitivity of nitroaromatics and nitramines — 192
11.4	Relationship between electric spark sensitivity and activation energy of the thermal decomposition of nitramines — 193
11.5	Correlation of the electrostatic sensitivity and activation energies for the thermal decomposition of nitroaromatics — 194
11.6	Relationship between the activation energy of thermolysis and friction sensitivity of cyclic and acyclic nitramines 195
11.7	Relationship between shock sensitivity of nitramine energetic compounds based on small-scale gap test and their electric spark sensitivity
11.8	Summary — 198

Problems — 199

Answers to Problems ----- 209

List of symbols ---- 213

- A Glossary of compound names and heats of formation for pure as well as composite explosives ---- 225
- B Calculation of the gas phase standard enthalpies of formation ---- 229
- C Glossary of compound names as well as the measured and calculated values of the condensed phase heats of formation for some energetic ionic liquids and salts ---- 237

Bibliography ---- 241

Index ----- 267
