Contents

Foreword to the English edition ----- V

1 Two conflicting directions in modern natural science ----- 1

- 1.1 The replacement of matter by geometry and world formulas ---- 2
- 1.2 The discovery of a new structural level of matter at the beginning of the 20th century 3
- 1.3 Paradoxical contradictions between microphysics and big-bang cosmology ----- 5
- 1.4 The anthropic principle: from superstrings to creationism 6
- 1.5 The penetration of the positivist world view into physics 7
- 1.6 Popper's attack on the inductive method 9
- 1.7 Idealistic rejection of laws of development 10
- 1.8 About the character of natural laws 11
- 1.9 Development from within through self-organization 12
- 1.10 Why a new dialectic concept of the æther is necessary 13
- 1.11 Dialectics of self-organization of matter 15

2 Self-organization in many-particle systems — 17

- 2.1 The mode of existence of atoms in phases 18
- 2.2 Structure formation close to equilibrium: domains, topological defects, and structures 26
- 2.3 Self-organization in transformation and transport processes ---- 33
- 2.4 Structure of atoms and their bond 41
- 2.5 Phases and their "Zoo of Excitations" ---- 46

3 Quantum gases and liquids ---- 51

- 3.1 Superfluidity ---- 51
- 3.2 Fermi gases and liquids 59
- 3.3 Superconductivity of electrons 67
- 3.4 Superfluids with spin Helium-3 ---- 75

4 Matter waves and quanta as expression of the effect of deeper structural levels of matter — 83

- 4.1 The filled "vacuum": zero-point fields 84
- 4.2 The dialectical unity of matter wave and particles 89
- 4.3 Quantum entanglement: common matter waves ---- 99
- 4.4 Stability of the electron shell of atoms 103
- 4.5 Dirac sea, quantum fields, and infinities 108
- 4.6 Matter waves as organizational states of the zero-point field 118

- X Contents
- 5 The influence of deeper structural levels of matter on motion and gravity 125
 - 5.1 Movement at high speeds 126
 - 5.2 The special theory of relativity 134
 - 5.3 Accelerated motion, inertia, and gravity 138
 - 5.4 The general theory of relativity 143
 - 5.5 On the origin of inertia and gravity in the quantum æther ---- 149

6 Self-organization in the microcosm: the zoo of the "elementary particles" — 157

- 6.1 The discovery of the "zoo of elementary particles" 158
- 6.2 The Standard Model and its limits 163
- 6.3 Structure formation by partial shielding of charges 168
- 6.4 The electroweak phase transition in the quantum æther ---- 172
- 6.5 The search for the unity of the forces of nature 177
- 6.6 Self-organization of "elementary particles" in the quantum æther 183

7 Dialectics of the evolutionary processes in the microcosm and macrocosm — 192

- 7.1 Evolution of stars and chemical elements ---- 193
- 7.2 Evolutionary processes of galaxies ---- 203
- 7.3 Nuclei of Active Galaxies ---- 210
- 7.4 Fermiogenesis in active galactic nuclei 220
- 7.5 The Structure Level of the Galactic Superclusters ---- 229
- 7.6 Red-shift and microwave background 234
- 7.7 Self-organization versus fine-tuning 238

8 Self-organized development of matter systems in the cosmos ---- 243

- 8.1 Development from within through self-organization ----- 244
- 8.2 Formation of systems, stability, and instability 245
- 8.3 The formation of laws of motion and nature ---- 246
- 8.4 Instabilities of systems at phase transitions ---- 248
- 8.5 Phase interfaces development of metamorphosis and complexity 249
- 8.6 The formation of topological structures by partial shielding of macroscopic fields 250
- 8.7 Stationary states and cyclic processes 252
- 8.8 Transitions between stationary states 254
- 8.9 Infinity of evolutionary processes in a system of structural levels ---- 255
- 8.10 Galaxy supercluster: agglomeration or self-organization? ---- 256

- 8.11 How does the cosmos develop to a vast size? --- 257
- 8.12 Fine tuning of the natural constants: Big Bang with "intelligent design" 258
- 8.13 Self-organization versus heat death 260
- 8.14 Controversies about the entropy of gravitating systems --- 261
- 8.15 Nonequilibrium and evolution are the determining factor 262

9 Mathematical appendix — 265

- 9.1 General properties of topological structures ---- 265
- 9.2 Topological structures in quantum fluids ---- 265
- 9.3 Causes of matter waves and inertial mass with uniform and accelerated motion 268
- 9.4 Shielding lengths and masses of the exchange quanta ---- 269
- 9.5 Theory of partially shielded gravity 272
- 9.6 Hubble law and interpretation using the theory of partially shielded gravity ---- 274
- 9.7 Model of the electron as a topological structure ---- 276

Bibliography — 277

Illustration sources ---- 291

Index — 295
