Preface — V

About the Author — XV

1	Polymer combustion — 1
1.1	Thermal decomposition — 1
1.1.1	Overview — 1
1.1.2	The thermal decomposition temperature and thermal decomposition rate — 4
1.1.3	Thermal decomposition modes — 6
1.1.4	The complexity of thermal decomposition — 10
1.1.5	The thermal decomposition mode — 12
1.1.6	Thermal decomposition products — 13
1.2	Ignition — 14
1.2.1	Lighting conditions — 14
1.2.2	Ignition and spontaneous combustion — 15
1.2.3	The performance of ignition — 17
1.2.4	The factors causing ignition — 19
1.2.5	Ignition model — 20
1.3	Combustion propagation and the spread of combustion — 21
1.3.1	Overview — 21
1.3.2	The spreading direction of combustion — 22
1.3.3	The heat conversion model of combustion propagation — 22
1.3.4	The factors affecting combustion propagation — 23
1.3.5	Combustion propagation coefficient of materials — 26
1.3.6	Combustion propagation model — 26
1.4	The full and stable combustion — 27
1.4.1	Overview — 27
1.4.2	Combustion key points — 27
1.4.3	Smolder — 29
1.4.4	Flashover — 30
1.4.5	Combustion model — 31
1.5	Combustion decay — 33
1.6	The smoke of combustion — 33
1.7	The toxic substances generated during combustion — 37
1.8	Corrosive combustion products — 38
1.9	Flame retardation patterns — 39
1.9.1	Physical model — 39
1.9.2	Chemical mode — 40
	References — 41

2	Flame retardation mechanism of halogenated flame retardants — 45
2.1	Flame retardation mechanism of single halogen FRs — 45
2.1.1	Flame retardation mechanism in gas phase — 45
2.1.2	Development of flame retardation mechanism in gas phase — 49
2.1.3	Flame retardation mechanism in condensed phase — 50
2.2	Flame retardation mechanism of halogen/antimony synergistic system — 52
2.2.1	Overview — 52
2.2.2	Flame retardation chemical mechanism of X/Sb synergistic system in gas phase — 53
2.2.3	Flame retardation mechanism of X/M synergistic system in condensed phase — 57
2.3	Suitable Sb/X atom ratio in X/Sb system — 59
2.3.1	Relationship between oxygen index and Sb/X atom ratio — 59
2.3.2	Relationship between ignition time and Sb/X atom ratio — 60
2.3.3	Relationship between heat release rate and chemical structure of brominated FRs — 61
2.4	Synergism between halogenated FRs and nanocomposites — 62
2.4.1	Synergism with PP nanocomposites — 62
2.4.2	Synergism with ABS nanocomposites — 63
2.4.3	Synergism with PBT nanocomposites — 64
2.4.4	Reaction mechanism between nanocomposites and halogenated FRs — 64
	References — 66
3	The flame-retardation mechanism of organic phosphorus flame retardants — 69
3.1	The flame-retardation mode in condensed phase — 69
3.1.1	The modes of carbonization — 70
3.1.2	The coating effect mode — 73
3.1.3	The modes of suppressing free radicals in condensed phase — 74
3.1.4	The modes based on the fillers' surface effect in condensed-phase modes — 74
3.2	Flame-retardant modes in gas phase — 74
3.2.1	Chemical effect modes — 74
3.2.2	The physical effect mode — 75
3.3	Polymer structure parameters affecting the efficiency of phosphorus flame retardants — 76
3.4	Phosphorus flame retardants and their interaction with others — 77
3.4.1	Phosphorus–nitrogen synergy Effect — 77
3.4.2	The phosphorus–halogen synergism — 81

3.4.3	Interactions between phosphorus flame-retardant system with the inorganic fillers — 83
3.4.4	Interactions among phosphorus flame retardants — 83
3.5	Flame retardant mechanism of aromatic phosphate acting on PC/ABS — 84
3.5.1	Thermal decomposition mechanism of PC — 84
3.5.2	The mechanism of flame retardants acting on PC/ABS — 88
	References — 90
4	Flame retardation mechanism of intumescent flame retardant — 95
4.1	Composition of IFR — 95
4.1.1	The three-component of IFR — 95
4.1.2	The conditions that the three components of IFR should satisfy — 96
4.1.3	Typical IFR — 97
4.1.4	Monomer IFR — 98
4.1.5	The proportion of three sources of IFR — 99
4.1.6	Inorganic IFR — 100
4.2	Thermal decomposition of IFR components — 101
4.2.1	Thermal decomposition of APP — 101
4.2.2	Thermal decomposition of APP/PER — 102
4.2.3	Thermal decomposition of pentaerythritol diphosphate — 104
4.2.4	Reaction between each IFR components and the polymer — 104
4.3	The expansion formation of char of IFR — 106
4.3.1	Char formation process and the chemical reaction — 106
4.3.2	Char formation reaction of the PEDPs — 108
4.3.3	Composition and properties of char layer — 110
4.3.4	Dynamic viscosity of material in the process of carbonization — 111
4.3.5	IFR recognition of HRR curves and TGA curves (char yield) — 113
4.3.6	Structure of carbon layer — 113
4.3.7	Flame retardancy of carbon layer — 115
4.4	Synergist of IFR — 118
4.4.1	Overview — 118
4.4.2	Molecular sieve — 119
4.4.3	Nano-ingredients — 121
4.5	Improvement of IFR — 122
4.5.1	Polymer charring agent — 122
4.5.2	Nanofillers as components of IFR — 123
4.5.3	Microencapsulation of IFR — 124
4.6	Further understanding of intumescing flame retardation mechanism — 125
	References — 127

5	Flame retardation mechanism of other flame retardants — 131
5.1	Flame retardation mechanism of metal hydroxides — 131
5.2	Flame retardation mechanism of fillers — 132
5.3	Flame retardation mechanism of borates — 134
5.4	Flame retardation mechanism of red phosphorus — 136
5.5	Flame retardation mechanism of polysiloxane — 137
5.5.1	Features of silicon compounds PC — 138
5.5.2	Flame retardation mechanism of organosilicon compounds in PC — 138
5.6	Flame retardation mechanism of sulfur-containing PC compounds — 141
5.7	Flame retardation mechanism of nitrogen compounds — 142
5.8	Influences of inorganic flame retardant's surface properties and conditions on flame retardancy — 144
5.8.1	Surface properties — 144
5.8.2	Influence of surface conditions on flame retardancy — 146
5.9	Solubility and mobility of additives in polymers — 149
5.9.1	Solubility — 149
5.9.2	Diffusion migration — 151
5.9.3	Losses of additives — 153
	References — 155
6	Flame retardation mechanism of polymer, inorganic nanocomposite materials — 157
6.1	Introduction — 157
6.2	The flame retardation mechanism of the nanocomposite materials of polymer/montmorillonite (layered silicate) — 158
6.2.1	The charring and char layer structure of PMN — 159
6.2.2	The char mechanism based on chemical reactions — 160
6.2.3	The migration enrichment mechanism of MMT in PMN — 161
6.2.4	The effects of quaternary ammonium salts used for modifying MMT — 162
6.3	Char formation of nanocomposite PP/MMT — 164
6.4	The charring of PS/MMT nanocomposite materials — 167
6.5	The thermal stability and flame retardant of PU/MMT nanocomposites — 170
6.5.1	Thermal stability — 170
6.5.2	Fire resistance — 172
6.6	Polymer/carbon nanotubes nanocomposites — 174
6.6.1	Carbon nanotubes (CNT) and their features — 174
6.6.2	The thermal stability of the nanocomposites of polymer/MWCNT — 175

6.6.3	The flame retardation of nanocomposites of polymer/MWCNT — 176
6.6.4	Char and char layer structure of polymer/MWCNT nanocomposites — 180
6.7	Polymer/layered double hydroxyl compounds nanocomposite — 185
6.7.1	Characteristics of LDH — 185
6.7.2	Thermal decomposition of EP/LDH — 186
6.7.3	Flame retardancy of EP/LDH — 187
	References — 190
7	The mechanism of smoke suppression — 195
7.1	The relationship between the molecular structures and smoke of polymers — 195
7.2	Smoke suppression mechanism of molybdenum compounds — 198
7.3	Smoke suppression mechanism of iron compounds — 200
7.4	Reductive coupling smoke suppression mechanism — 202
7.5	The smoke suppression mechanism of Mg-Zinc compounds — 205
7.6	The smoke suppression mechanism of other smoke suppressors — 206
	References — 208
8	Technical means on flame retardation mechanism — 211
8.1	Cone calorimetry — 211
8.1.1	Principles and measurable parameters — 211
8.1.2	Operation — 211
8.1.3	Features — 213
8.2	Radiation gasification assembly — 213
8.3	Laser pyrolysis device — 215
8.4	Differential thermal analysis and differential scanning calorimeter — 216
8.4.1	Fundamental principles — 216
8.4.2	Operation — 218
8.4.3	Application — 219
8.5	Thermogravimetric analysis — 221
8.6	Thermodynamic analysis — 223
8.7	Electron microscopy — 226
8.7.1	Transmission electron microscopy — 226
8.7.2	Scanning electron microscopy — 227
8.7.3	Application in polymer research — 228
8.8	Wide-angle X-ray diffraction method — 229
8.8.1	Principle and equipment structure — 229

XIV — Contents

8.8.2	Role of X-ray diffraction in studying flame retardation mechanism — 230
8.9	X-ray photoelectron spectroscopy — 232
8.9.1	General principles and equipment structure — 232
8.9.2	Application in flame retardation mechanism — 234
8.10	Infrared spectroscopy and Raman spectroscopy — 235
8.10.1	Infrared spectroscopy — 235
8.10.2	Laser Raman spectroscopy — 238
8.11	Nuclear magnetic resonance spectroscopy — 242
8.11.1	Nuclear magnetic resonance — 242
8.11.2	Proton nuclear magnetic resonance spectrum — 242
8.11.3	Carbon-13 NMR spectroscopy — 245
8.11.4	NMR spectra determination — 246
8.11.5	Solid-state nuclear magnetic resonance — 246
8.12	Mass spectrometry — 249
8.13	Chromatography — 251
8.13.1	Principles — 251
8.13.2	Thin-layer chromatography — 252
8.13.3	High-performance liquid chromatography — 253
8.13.4	Ordinary gas chromatography — 255
8.13.5	Other gas chromatography methods — 257
8.13.6	Gel permeation chromatography — 259
8.14	Methods to determine the degree of intumescence and strength of char layers — 260
8.14.1	The degree of intumescence — 260
8.14.2	Intensity — 263
	References — 264

Appendix — 267
