List of Figures	xii
List of Tables	xiv
List of Algorithms	xv
List of Abbreviations	xvi
List of Symbols	xviii
1 Introduction	1
1.1 Motivation	1
1.2 Example	2
1.3 Outline	5
1.4 Contributions	10
2 Fundamentals of Large-Scale Crew Scheduling	11
2.1 Crew Scheduling	11
2.1.1 Definition of Terms	11
2.1.2 Fields of Application	12
2.1.3 Operational Planning Context	13
2.2 Large-Scale Optimization Techniques	14
2.2.1 Dantzig-Wolfe Decomposition	14
2.2.2 Column Generation	16
2.2.3 Master Problem Solution	19
2.2.4 Subproblem Solution	22
2.2.5 Integrality Techniques	25
3 Solving Crew Scheduling Problems in the Railway Industry	32
3.1 Problem Description	32

3.2	Literature Review	38
3.3	Railway Crew Scheduling Model	41
3.4	Solution Method	43
3.5	Organizational Implementation	47
3.6	Managerial Implications	48
3.6.1	Improving the Job Satisfaction of Crew Members	48
3.6.2	Assuring Robustness of a Crew Schedule	51
3.6.3	Effect of Business Unit Structure on Crew Scheduling	53
3.7	Benefits	55
4	The Divide-and-Price Decomposition Algorithm	57
4.1	Problem Description	58
4.2	Literature Review	60
4.3	Mathematical Model and Solution Approach	62
4.3.1	Mathematical Formulation	64
4.3.2	Solution Approach	66
4.3.3	Optimization Progress	78
4.4	Computational Results	81
4.4.1	Planning of Weekly Schedules	82
4.4.2	Planning of Daily Schedules	87
5	Decomposition Strategies for Large-Scale Crew Scheduling Problems	90
5.1	Decomposing Crew Scheduling Problem Instances	90
5.2	Literature Review	94
5.3	Modeling and Solution Approach	96
5.3.1	Edge Weights	97
5.3.2	Subset Sizes	101
5.3.3	The GPP Solution Algorithm for Decomposing CSP	102
5.4	Computational Results	107
5.4.1	Correlation Analysis	109
5.4.2	Effects of Edge Weight Definition and Range	111
5.4.3	Combination with Divide-and-Price	120
6	Conclusion and Outlook	127
6.1	Conclusion	127

6.2	Critical Review	129
6.3	Directions for Further Research	131
