Preface — V

1	Periodic differential equations and isotopies — 1
1.1	From oscillators to population dynamics — 1
1.2	The Poincaré map — 4
1.3	Diffeomorphisms and Poincaré maps — 8
1.4	Isotopies and diffeotopies — 9
1.5	The flow of a periodic equation — 11
1.6	Bibliographical remarks — 14
2	Massera's theorems — 17
2.1	Equations in the line — 17
2.2	Some examples in the plane — 22
2.3	Second Massera theorem — 25
2.4	Persistence of harmonic solutions — 30
2.5	Bibliographical remarks — 33
3	Free embeddings of the plane — 37
3.1	Topological embeddings — 37
3.2	Orientation-preserving embeddings — 40
3.3	Limit sets, trivial dynamics and free embeddings — 42
3.4	Brown's degree condition — 44
3.5	Translation arcs and Brouwer's lemma — 46
3.6	Existence of translation arcs — 48
3.7	The complement of the fixed point set — 52
3.8	More on free embeddings and a proof of Brown's theorem — 56
3.9	Two fixed point theorems — 59
3.9.1	Area-preserving maps of the open disk — 59
3.9.2	Fixed points on invariant continua — 63
3.10	Proof of Massera's theorem — 68
3.11	Bibliographical remarks — 70
4	Index of stable fixed points and periodic solutions — 73
4.1	Lyapunov's stability — 73
4.2	The index of a stable equilibrium — 78
4.3	The plug construction — 82
4.4	Some dynamical insights — 88
4.5	The index of a stable fixed point — 93

4.6	Simply connected invariant neighborhoods and proof of Theorem 12 — 97
4.7	Some corollaries of Theorem 12 — 101
4.7.1	Resonance at the roots of the unity — 101
4.7.2	Stability and persistence — 104
4.8	Global asymptotic stability and extinction of two populations — 106
4.9	Stable fixed points of area-preserving maps — 112
4.10	Some applications to Hamiltonian systems — 118
4.10.1	The number of stable periodic solutions — 119
4.10.2	Stable closed orbits with two degrees of freedom — 123
4.11	Bibliographical remarks — 127
5	Proof of the arc translation lemma — 131
5.1	Equivalence of embeddings — 131
5.2	Compression of translation arcs — 132
5.3	Reduction to periodic orbits — 134
5.4	Lemmas on isotopies — 139
5.5	Computation of the degree on certain Jordan domains — 142
5.6	Brouwer's lemma and some consequences — 145
5.7	Bibliographical remarks — 145
6	Appendix on degree theory — 147
6.1	Definition — 147
6.2	Some useful properties — 148
6.3	Computation of the degree — 150
6.3.1	The degree in one dimension — 150
6.3.2	Degree on a disk — 151
6.3.3	Degree of a linear map — 151
6.3.4	Linearization property — 152
6.3.5	The degree of a Cartesian product — 153
6.4	Fixed point index and some principles — 153
6.5	Degree and invariant curves — 155
6.6	Bibliographical remarks — 157
7	Solutions to the exercises — 159
7.1	Chapter 1 — 159
7.2	Chapter 2 — 161
7.3	Chapter 3 — 166
7.4	Chapter 4 — 169
7.5	Chapter 5 — 174
7.6	Chapter 6 — 175

Bibliography — 179

Index — 185
